Tables

1.1 Married women's labour force participation in Ireland, 1961–2009 (%)  
1.2 Total fertility rate, 1960–2007 for selected high- and low-fertility EU countries  
1.3 Relationship between married women's labour force participation and total fertility rate in Ireland, 1960–2009  
2.1 Fieldwork: frequency and distribution of contacts  
2.2 Comparison of unweighted sample, weighted sample and Central Statistics Office population estimates for key demographic characteristics  
3.1 Factor analysis of twenty-nine items measuring attitudes to gender roles: items from six Varimax rotated factors (N = 1,404)  
3.2 Percentage distributions of attitudes to gender roles, grouped by factor (N = 1,404)  
3.3 Analysis of variance: effects of five demographic characteristics on six factors measuring attitudes to gender roles (N = 1,404)  
4.1 Factor analysis of thirty-five items measuring attitudes to relationships: selected items from seven Varimax rotated factors (N = 1,404)  
4.2 Percentage distributions of items measuring attitudes to family formation, grouped by factor (N = 1,404)  
4.3 Cross-cultural data from ISSP survey on item, ‘People who want children ought to get married’ (percentage agreeing, 1988–2002)  
4.4 ISSP data for item, ‘People who want children ought to get married’ (percentage agreeing by age group; Ireland only, 1988–2002)  
4.5 Analysis of variance: effects of five demographic characteristics on seven factors measuring attitudes to family formation (N = 1,404)
List of tables

4.6 Length of time living together in the last three cohabitations (N = 873) 85
4.7 Intention of cohabitees to marry in the future by gender, age, presence of children and education (N = 304 unweighted, 160 weighted) 89
4.8 Intention of cohabiting people to marry current partner, by gender, age, presence of children and education (N = 304 unweighted, 160 weighted) 89
5.1 Factor analysis of thirteen items measuring attitudes to having children: selected items from four Varimax rotated factors (N = 1,404) 96
5.2 Percentage distributions of items measuring attitudes to having children, grouped by factor (N = 1,404) 101
5.3 Analysis of variance: effects of five demographic characteristics on four factors measuring attitudes to having children (N = 1,404) 106
5.4 Analysis of variance: main effects of four demographic variables on actual, expected and ideal family size (N = 1,404) 111
6.1 Analysis of variance: effects of five demographic characteristics on importance of four areas of life (N = 1,404) 117
6.2 Analysis of variance: effects of five demographic characteristics on satisfaction with five areas of life (N = 1,404) 119
6.3 Analysis of variance: effects of five demographic variables on Autonomy (N = 1,404) 122
6.4 Frequency of attendance at religious services: cross-tabulations by six demographic characteristics 123
7.1 Factor analysis of thirteen items measuring attitudes to work–life balance and related social policies: selected items from three Varimax rotated factors (N = 1,404) 126
7.2 Percentage distributions for items measuring attitudes to work–life balance and related social policies, grouped by factor (N = 1,404) 132
7.3 Analysis of variance: effects of five demographic characteristics on three factors measuring attitudes to work–life balance and related social policies (N = 1,404) 135
7.4 Correlations between attitudes to having children and attitudes to work–life balance and related social policies (N = 1,404) 136
8.1 Summary of stepwise multiple regression of predictors of being single vs. cohabiting or being married: males only and females only 139
List of tables

8.2  Multiple regression analyses: predictors of family status – single vs. married, single vs. cohabiting and cohabiting vs. married for males only and females only 145
9.1  Summary of stepwise multiple regression of predictors of expected family size 155
9.2  Summary of stepwise multiple regression of predictors of ideal family size 158
10.1 Analysis of variance: effects of six demographic characteristics on eight measures of well-being (N = 1,404) 164
10.2 Happiness levels of those in various dating situations (N = 625) 173
A.1  Perceived facilitators to current cohabitation: percentage responses and means of cohabiting people (N = 304 unweighted; 160 weighted) 200
A.2  Factors perceived by cohabitees as relevant to getting married 201
A.3  Married people’s perceived facilitators to current marriage 202
A.4  Likelihood of having children one day: percentage responses and means by gender, age, family status, children and education (N = 1,404) 203
A.5  Expected number of children, percentages and means by gender, age, family status, children and education (N = 1,404) 204
A.6  Perceived facilitators and constraints to childbearing (N = 1,404) 205
