Preface and acknowledgements

This book emerged as the result of a workshop entitled Big Data from the Bottom Up that was held at University College London in October 2015. The workshop was jointly funded by the UCL Big Data Institute and the ESRC Centre for Research on Socio-Cultural Change and was also supported by the UCL Centre for Digital Anthropology which hosted the event. We want to thank all those who attended and participated in the workshop and provided reflections and comments on the contributions. In addition to many of the authors of the chapters presented here, we would also like to thank other workshop participants Allen Abramson, Ben Anderson, David Berry, Anne Burns, Kimberly Chong, Sara Randall, Irina Shklovski and Farida Vis for their contributions. At the Big Data Institute we wish to thank Patrick Wolfe who opened the event for us and also to thank the institute for making available funds for Dawn Nafus to visit UCL as a visiting scholar in the autumn of 2015. At CRESC thanks go to Mike Savage and John Law for their thoughts on the Social Life of Method, and Penny Harvey who has been very involved in CRESC-related research on digital data and whose involvement in a parallel CRESC project run by Evelyn Ruppert on Socializing Big Data contributed to the conceptualisation of this event. Thanks also go to Claire Dyer and Yang Man who provided invaluable administrative support. Jennifer Collier Jennings has provided important community building work at EPIC that has informed much of the thinking here.

Thanks must also go to Manchester University Press who have supported this project from the inception, attending the original event and supporting us throughout the process of putting together this volume.

Other people who have been instrumental to the inception of this volume and the ideas herein include Haidy Geismar, Shireen Walton, Ludovic Coupaye, Damian O'Doherty, Rajiv Mehta, Gwen Ottinger, Randy Sargent, Tye Rattenbury, ken anderson, Suzanne Thomas, Richard Beckwith, the Data Sense team at Intel and many of the students enrolled on the MSc in Digital Anthropology at UCL. Thank you for all of your thoughtful comments and reflections on data, technology and anthropological methods over the past three years.

Finally thanks to our families. Hannah thanks Imogen, Francesca, Beatrice and Damian for being there and holding things together, whilst Dawn thanks Dan, Penni, both Jims and Pattie for their continued support of her adventures.
