List of contributors

Helene Castenbrandt is a researcher in the Department of Economic History at Lund University in Sweden where she is working on the history of long-term sickness absence. Castenbrandt's dissertation (2012) dealt with dysentery in Sweden between 1750 and 1900 as a demographic and medical history of a disease. Her main research interests involve medical history, demographic changes, and population history. Recently she published an article in *Economic History Review* (2018) on 'Trends in morbidity: national statistics on sickness claims among the working population in Sweden, 1892–1954'.

Barry M. Doyle is Professor of Health History at the University of Huddersfield. His teaching and research interests cover the political, social, and economic history of urban Britain in the late nineteenth and twentieth centuries. He has a particular interest in the development of health care systems before welfare states and the history of hospitals in Britain and Europe; the history of first aid and voluntary health care; and the development of maternity services in a global context. In 2014 he published *The Politics of Hospital Provision in Early Twentieth Century Britain* (Routledge).

Oliver Falk is Research Associate at the Institute of Biomedical Ethics and History of Medicine (IBME), University of Zurich. His main research areas are the history of diabetes therapy, doctor–patient relationships throughout the twentieth century, the epistemology of therapeutic self-techniques and medical writing, as well as sociology of

knowledge in medicine. He recently published an article on the patient as an epistemic factor: 'Der Patient als epistemische Größe', *Medizinhistorisches Journal* 53 (2018).

Jean-Paul Gaudilliere is Senior Researcher at the Center for Research in Medicine, Science, Mental Health, and Society (CERMES 3) of the French Institute of Health and Medical Research. In 2015, he received an Advanced Grant from the European Research Council on the historical transformation 'From international public health to global health: knowledge, diseases, and the government of health since 1945'. He has also worked and published on the relationships between science, medicine, and the pharmaceutical industry and the regulation of drugs in the twentieth century, as well as on medicine and risk management in cancer-related environmental health since the 1960s. He is involved in the volume *Global Health and the New World Order* that will be published in 2020 in the same book series as the current volume (Social Histories of Medicine).

Volker Hess is Chair of the Institute for the History of Medicine at the Charité Medical School in Berlin and Affiliated Professor in the History Department of the Humboldt University. In 2011, he received the Advanced Investigator Grant from the European Research Council for a collaborative project with J. Andrew Mendelsohn in reconstructing the 'paper technologies' of medical practices, based on their article in the journal *History of Science* (2010). In 2019, he was awarded an ERC Synergy Grant to study Europe's postwar history through the lens of medicine. With regard to the topic of the current volume, he edited with Alexa Geisthövel a volume on medical expertise (*Medizinisches Gutachten. Geschichte einer neuzeitlichen Praxis*, Göttingen 2017).

Axel C. Hüntelmann is Postdoctoral Research Fellow at the Institute for the History of Medicine at the Charité Medical School in Berlin. He has worked and published on the German Imperial Health Office (PhD 2007) and other European public health institutions between 1850 and 1950; scientific infrastructures; the history of laboratory animals; the production, marketing, and regulation of pharmaceuticals in Germany and France; and has written a biography on the immunologist Paul

Ehrlich (2011). He trained in accounting as well as history and is currently finishing a book on accounting and bookkeeping in medicine (1730–1930).

J. Andrew Mendelsohn is Reader in History of Science and Medicine at Queen Mary University of London. He co-led with Volker Hess the ERC-funded research project ‘How physicians know, 1550–1950’. His research focuses on ways of writing and knowing and their effects in science and medicine; observation, experimenting, classifying, and predicting; and industrializing life and its sciences from the eighteenth to the twentieth century. Recent publications include the co-edited volume *Civic Medicine: Physician, Polity and Pen in Early Modern Europe* (2020).

Theodore M. Porter is Distinguished Professor of History at University of California, Los Angeles. His research integrates history of data, statistics, and quantification within the history of the human sciences. His most recent book is *Genetics in the Madhouse: The Unknown History of Human Heredity* (Princeton University Press, 2018).

Sebastian Pranghofer is Lecturer in Early Modern History at the Helmut-Schmidt-University in Hamburg. His main areas of research are early modern military administration and logistics; war, medicine, and disease; as well as the history of early modern anatomy. On military medicine, he recently published ‘Zur Anatomie beurlaubt. Qualifizierung und Karrieren von Feldscheren in Berlin und Hannover im 18. Jahrhundert’, in Johanna Bleker, Petra Lennig, and Thomas Schnalke (eds), *Tiefe Einblicke: Das anatomische Theater im Zeitalter der Aufklärung* (Berlin 2018).

Philip Rieder is Senior Lecturer (maître d’enseignement et de recherche) at the Institut Ethique Histoire Humanités (IEH2), University of Geneva. He has published widely on a variety of topics pertaining to the social and cultural history of medicine in the early modern period, namely the history of the patient, of medical practices, and of healers. Recently he edited with François Zanetti a volume on *Materia Medica: savoirs et usages des médicaments aux époques médiévales et modernes* (Geneva 2018), with his chapter on the history of the apothecary.

Andrea Rusnock is Professor in the Department of History at the University of Rhode Island and was the editor of *Osiris* between 2009 and 2017. She has worked and published widely on science and medicine in the Enlightenment; the history of quantification; public health and the environment; and on the history of vaccination. In 2002, she published *Vital Accounts: Quantifying Health and Population in Eighteenth-Century England and France* (Cambridge University Press).

Christopher Sirrs is Postdoctoral Fellow in the Department of History, University of Warwick. At the time of writing, he was a Research Fellow at the Centre for History in Public Health, London School of Hygiene and Tropical Medicine. An historian of medicine and public health, his research encompasses the history of global health, health systems, and occupational health and safety. In 2020, he started a research project funded by the Wellcome Trust, exploring the history of safety in the British National Health Service. His most recent publication is a journal article in the *International History Review*, exploring the International Labour Organization's approach towards health system financing in the second half of the twentieth century.

Laura J. M. Stark is Associate Professor at Vanderbilt University, Associate Editor of the journal *History & Theory*, and creator of the Vernacular Archive of Normal Volunteers housed at the Countway Center for the History of Medicine. Her research focuses on science and technology studies; social theory; and the history of science and medicine from feminist and postcolonial perspectives. In 2012, she published *Behind Closed Doors: IRBs and the Making of Ethical Research* with the University of Chicago Press and in 2019 she won the Freidson Prize from the American Sociological Association for her article in *Social History of Medicine*: 'Contracting health: procurement contracts, total institutions, and the problem of virtuous suffering in post-war human experiment'.

Michael Stolberg is Chair of History of Medicine in Würzburg, Germany. He has published widely on the history of early modern medicine. His most recent book is *Gelehrte Medizin und ärztlicher Alltag in der Renaissance* (Berlin: DeGruyter Oldenburg, 2020) and will be published in English (2021) as: *Learned Physicians and the World of Medical Practice in the Renaissance*.

Joris Vandendriessche is Postdoctoral Fellow of the Flanders Research Foundation (FWO) in the Cultural History since 1750 Research Group of the University of Leuven (Belgium). His research focusses on the history of scientific knowledge, medicine, and universities in the nineteenth and twentieth centuries. He is the author of *Medical Societies and Scientific Culture in Nineteenth-Century Belgium* (Manchester University Press, 2018) and *Zorg en wetenschap. Een geschiedenis van de Leuvense academische ziekenhuizen in de twintigste eeuw* (Leuven University Press, 2019). His current project engages with publishing practices and piracy in nineteenth-century science.
